Launching a New Bio-Based Workflow for HSP Determinations

Alongside the increasing demand for bio-based alternatives, the interest in predicting and improving ingredients compatibility via Hansen Solubility Parameters (HSP) keeps growing in the formulation industry. In this regard, VLCI is proud to launch a bio-based workflow for HSP determinations.

In partnership with 11 suppliers, we have gathered over 20 bio-based solvents spread across the HSP space. Besides compatibility predictions, this approach offers straightforward and practical insights about the applicability of the bio-based solvents to all industries, including numerous solvent blends possibilities.
