

OPENING OF VLCI BARCELONA !

With great pleasure, we announce that **VLCI** has opened a new facility at the **Parc Científic Barcelona!**

VLCI already offers a unique service, combining state-of-the-art formulation science with High Throughput screening technologies. Expansion into our new facility now provides access to an even wider variety of equipment to boost our testing and analysis capabilities. Intelligence gathered from preliminary investigations at VLCI Barcelona can be transferred to the High Throughput laboratory in Amsterdam, for implementation in subsequent formulation optimisation programmes.

VLCI Barcelona will also serve as the home of our new concept: the **Technology Distribution Centre (TDC)**. The TDC will help to connect companies to the most promising formulation technologies and solutions. Prospective parties will be targeted through active scouting, or by publications made by the TDC. Born out of VLCI's own innovation, its ongoing collaborations, or publishable work for existing customers, the technologies hosted by the TDC will be matched to clients' needs and requirements.

This is a really exciting way of working – building better partnerships and promoting greater innovation across the entire product development process.

From small companies to large multinationals, VLCI serves the worldwide formulation industry, on a project-by-project basis. Visit our website www.vlci.biz to find out more about our formulation-boosting services!

Best regards,

Sander van Loon, CEO
